

Name	Item	04/24	04/25	04/26	04/27
Samuel Kuhn	Yesterday's work:	Began first VF test	Worked on demo scripts for presentation; converting VF extensions to custom controllers, reviewing practice exam, taking more practice exams	Worked on LDS trailhead; flashcards for PD1; final attempts at testing	Worked on Presentation Slides; studied for PD1
	Today's work:	Push on 3 main things: finish testing, study the LWC content for PD1 and assesments, begin on presentation work	I'd like to work on the same 3 things so I'm making steady progress on each of them: presentation, exam prep, project	PD1 practice exam, presentation work, trailhead	Presentation for P2
	Roadblocks:	I got stuck on creating a lightning record view form, then got stuck trying to implement parent to child communication	n/a	Got stuck on setting up test data related to pricebooks/orders and parameters	n/a
	Comments:			I did not get as far as I wanted to on my testing so I'll need to reference that in future directions	
Taylor Billingsley	Yesterday's work:	Working on testing, studying LWC content, worked on formatting flow for presentation	Completed another Use case, worked on styling for Project's homepage, finished testing VF pages	Added page messages from my table so the errors would generate in Salesforce format; worked on the Homepage screen for our presentation, adjusted my flow so that files would directly upload to our case	Worked on design of slides, studied
	Today's work:	Quizzes, possibly one-on-one for Loom/else	Working on orientation of logos for my VF page, reviewing debug logs, working on slides	I want to work on presentation slides this morning so that rehearsal goes smoothly this afternoon; I'd also like to get more involved with the FOF PD1 content	Complete presentation; Study PD1, study LWC, study study study
	Roadblocks:	Note: for demo, we'll use test contacts, because those that have case associated don't delete	N/A - flex box for Logos	N/A	N/A
	Comments:	Note: for demo, be mindful of account emails (format)		The flexbox for our logos is working now!	
Nicholas Kroeger	Yesterday's work:	Testing begin, LWC	Testing finally underway, PD1 studying start	Finished all use cases but the import org one	Org migration debugging
	Today's work:	Pd1 begin, finish apex testing, convert to custom controller for opportunities home page	Finish testing (need negative test for opportunity home), also need to re-implement a feature that disappeared for some reason	Test the import org use case, presentation prep, maybe put the navigation bar on VS pages	Presentation, make 100% sure the debugging works
	Roadblocks:	Cant figure out how to test extensions	Studying for PD1 and finishing the project leaves me short on time	P2 im fine, but a bit behind where I'd like to be for studying for PD1	1 org I made doesn't work well
