Samuel Kuhn	Yesterday's work:	Made more progress on visualforce use case over the weekend; practiced for QC and interview stuff	Worked on visualforce use case more	VF use case - progress on re-rendering, adding products	Completed VF use case on Orders and Products; first attempt at testing	Ran all but restricted user testing on my trigger use case
	Today's work:	Try to make more progress on my visualforce use case; continue general studying	More VF use case	VF use case - removing products	primary focus is to get through as much apex testing as possible; also want to do some initial work on the presentation - would like to get some direction from Nick on that	Error handling and testing VF pages
	Roadblocks:	2 things I figured out over the weekend that really confused me: 1) in an extension - controller. getRecords is a really useful method; 2) if you are trying to take input that isn't related to an SObject field, you need to use page docType="html-5.0" and an apex:input instead of an apex:inputField	Pricebook entry field on the order item is required but hidden	Got stuck on but figured out updating my list view - came down to requering records for the list view object	My testing files don't show up in VS Code - not sure if I need some specific file structure - was able to work around this by just doing testing in the Developer console	Still a little confused on an example of something to test on a VF page
	Comments:				I would really like to learn how to step through my code using the Developer Console. I think this could drastically speed-up my debugging process - mainly to see the values of variables at different times in execution.	
Taylor Billingsley	Yesterday's work:	Worked on visualforce pages (80% ready, just need to work out the delete function on their second pages)	Fixed my visualforce delete button, adjusting page redirect with Page Ref instead of outputLink	Uploaded one of the visualforce pages; made adjustments to the other one	Visualforce page ready, just needs testing and some design (fixed the amount of records that show, might add next buttons for each page)	Update the quick action button underneath contacts in order to add the Contact-Type; Maintenance of my visualforce pages
	Today's work:	Quizzes, Loom videos, study with lightning components	QC, more content, style pages so they're appealing	Going to implement custom method next and previous button for each page	Going to work on LWC content and test code + styling; I want to create a static resource styling sheet for all of our use cases	Testing for pages, completing different use case if possible, working on in-line editing feature
	Roadblocks:	Need to do wireframe?	My VS says no results when I push but most likely a quick fix	Need to adjust one Schema.SObject method I put in my code for security	N/A	N/A
	Comments:				Would like to hear comments about design: can be later	
Nicholas Kroeger	Yesterday's work:	Wireframing VF page, Studying for QC/quizzes	Most of Base functionality for VF page, studied for QC	Most of VF page is done, need delete function.	Completed all required non-testing Use cases	Presentation prep, review, etc
	Today's work:	Study for QC, Quizzes, VF page	QC, last minutes studying, finish (?) VF page	Begin to look into testing for apex, finish VF page, portfolio again	Reformat every phone number in the database so that I don't have to figure out how to include format into the valid rule. Begin prepping pres,	Finish testing, bit more review, begin designing slideshow
	Roadblocks:	Didn't have enough time to actually start the code for my VF page	N/A		Stuff we learned yesterday a but confusing	bit unclear on running tests
